

Use Case: Like/Dislike Profile

Basic Course: In the browsing page, if a user like/dislike another user's profile then the choice would be stored in the server to match.

Pre-condition: User clicks the like button on the profile that they see.

Post-condition: Profile is stored in the database to create a match.

A user dislikes another user's profile, the choice would be stored in the server to not match.

Pre-condition: User clicks the dislike button on the profile that they see.

Post-condition: Profile stores in the database so that it is not matched or shown in future.
